IS PLEASED WITH PIOCHE PROPERTY

Lafayette Holbrook, President of Grand Central, Back From Nevada.

KNIGHT SMELTER READY FOR ORE IN FEBRUARY

District Is Awaiting Completion of Railroad Spur Into That Section.

Lafayette Holbrook, president of the Grand Central Mining company, was in the city yesterday, on his re-turn from an inspection of the Pioche district. When asked relative to recentral, he stated that the Grand Central, he stated that the Tintic Smelting company had not served his company with a notice to begin forwarding the ores. He stated that the Knights advised him that they had but one number the Swanssa mine, and one pump at the Swansea mine, and that they had found that this could not be depended upon at all times to raise all the water needed at the

An order has, therefore been place for another large pump, which will be placed in the Swansea mine. In case one pump then fails to work, the other can be called into service. The new pump has not yet arrived, but in the incantime arrangements were made with meantime arrangements were made with the Gemini Mining company to ful mish an additional supply of water. A soon as the connections are made with the Eureka Hill water line, the smelte will have ample emergency appliance for all water that will be needed in the future. The smelter will be read to take custom ores in February. Pioche Looks Good.

Pioche Looks Good.

Mr. Holbrook said that this was his first trip to Pioche since 1872. While he had always believed that they would make a big shipping camp of Pioche, he was very much pleased with the showing that had been made by the operators in the past few years.

While in Pioche, Mr. Holbrook confined his inspection to the west veins, starting with the Prince Consolidated property and extending north to the Point section, covering an area of two and a half miles in length. He found the Prince in fine ore, with a better showing being made as depth is attained. They are waiting for the extension of the railroad spur into that portion of the district, and when this is completed they will have the Prince in condition to ship a large tonnage of first-class product. of first-class product.

The Demijohn appears to be on the same ore zone as that one ned up by the Prince, and the Kirby-Hodson Webber properties are as well located as any of the groups in that belt Present indications point toward several good properties being developed in the western portion of the camp.

Mr. Holbrook and his associates own some property in Pioche. Since the railroad has been huilt to the camp, they plan on doing some work on their ground, possibly within a few months time.

CONFIDENCE IN FINK PROCESS

M. M. Johnson, Newhouse Engineer, Says System Is a Most Practicable One.

PROCESS DOES AWAY WITH USE OF COKE

Yerington Mines Forced to Close on Account of a Lack of Power.

"I have had confidence in the Fink process of smelting ores since he first began to demonstrate the practicability of his methods," said M. M. Johnson, chief of the engineering staff of the Newhouse forces, yesterday. Mr. Johnson said that since he became acquainted with Edward Fink he decided that the inventor of the new process had a practical knowledge of the smelting business, and that no one was more pleased to learn of the success achieved than he was.

He said that the process was simi-

smelting business, and that no one was more pleased to learn of the success achieved than he was.

He said that the process was similar in some respects to the old-time usages, but that it was a new application of the methods that had been employed from times immemorial. The metallurgical problems were along the same lines, with slight changes, while the principal alterations were in applying charges of coal or oil, which would eliminate the use of coke, Coke is not only an expensive fuel, but in a number of smelters the percentage of coke required in the fuel mixture with coal is very large. The Fink process requires a much smaller amount of fuel, while the furnaces are so arranged that the fires are fed in part by the sulphur from the ores.

This invention is being watched by mining men in every section of the west where ores are mined. Yerington producers are especially interested in the Fink invention, for if it can be applied as cheaply as predicted, it will mean a great deal to the copper producers in that section.

The smelting problem has been the great drawback to Yerington. Without railroad facilities, and a large tounage already blocked out, the mine owners have been conferring as to the best means by which the ores could be milled and the concentrates forwarded to the smelter at Ely, or some of the valley plants. With the Fink plant in operation, the Yerington producers could enter upon a profit-making basis that would mark that camp as one of the great red metal producers of the west.

Verington Mines Close.

Yerington Mines Close.

Yerington Mines Close.

Information has just been received at this point to the effect that the Yerington mines have been forced to close down for lack of power. Since the great washouts in Nevada, the Truckee Power company has been unable to keep its water power harnessed. This has necessitated the shutting off of the power that was furnished the mine operators in Yerington, and it may be a month before they will be able to resume.

Coming as it does at this time when a number of the properties are getting into the most interesting part of their work, it is quite disappointing to the mine owners of that south camp. Some arrangements will be made to prevent a recurrence of this unfortunate affair.

Stock Letter.

James A. Pollock & Co., bankers and brokers, 5 West Second South street, furnish the following, received over their private wire yesterday afternoon:

Dick Bros. Stock Letter, New York.—
Another advance in stocks this morning attracted profit-taking and the reappearance of that sort of seiling later encouraged renewed bearish attacks. Consequently the carly gains were not maintained and the list closed rather heavy in tone. Such irregularity is quite logical, especially since the Japanesse warbugaboo has reappeared, but the real tendency is upward and reactions will be temporary only. On them stocks should be bought, particularly those to which we have been calling attention of late, such as Norfolk & Western, Chesapeake & Ohio, Fanhandie, St. Paul, Rock Island Issues, Bethiehem Steel, M. K. & T., and Eric. Stock Letter.

TRADING CONFINED TO

Testerday's trading for the most part was confined to the smaller-priced This confined to the smaller-priced This confine properties. This was the result of the rapid advance made in the shares of the East Intic Development company during the two previous days, which brought a number of the adjoining prospects into the active list of participants. During the afternoon from Blossom took a sudden spurt, moving up to \$2.50 at the close. Reports from some of the late arrivals from Tintic are authority for the statement that they are in a splendid formation in the face of the new drift that was sent out from the new tunnel, and this had the effect of moving the stock upward. The total trading for the day brought out 241,226 shares, of a market value of \$14,904.85. The following is the closing listed and unlisted transactions:

Ore Shipments. The Pioneer sampler on Friday released two cars of ore from Utah and one from Nevada.

The Taylor & Brunton Co. released eight cars from Utah and four from Nevada camps

CONFINED TO EAST TINTIC STOCK UNUSUAL ACTIVITY IN CREEK COUNTRY

Theodore Property Has Splendid Showing Within Fifty Feet of Surface.

A letter from William M. Lamb, who is operating in the Deep Creek country, is to the effect that there are more than the usual activities in mining in that section. He says that in his years of experience in that country there never has been a time when so many men were doing legitimate development, and that they are getting results that are sure to have a splendid effect on the future of that district.

On the Theodore properties, that are being operated by Mr. Lamb, there are splendid showings within fifty feet of the surface. The copper values run high, according to the camp assays, and several dollars in gold is shown in the returns. They will continue an active winter's campaign upon this ground, having hauled all their supplies and necessary equipment early in the season. s operating in the Deep Creek country

Interested with Mr. Lamb in another group are Dr. Stewart. Judge Diehl and others of this city. They have opened up a twenty-foot vein on the group, which carries high values in copper. The returns show the presence of 6 per cent in the red metal and \$4 to the ton in gold. Later in the year there will be more work done on this ground, as the railroad spur has been promised by the Western Pacific, which will place a number of properties in position to number of properties in position to

ship. At least a dozen properties are now prepared for shipping in that region. The mine owners will make an effort to get a smelter built, as one of the Guggenheim engineers has just completed an inspection of the camp and given it out that, with sufficient inducement, the American Smelting and Refining company can be depended upon to construct furnaces. The Guggenheim representative also made inquiry as to prices on some of the ground that has the best showing. This leads some of the pioneers to believe that they will soon have some of the big operators in that district.

OUIII DIO DDE LDEUL CHILD 2 DKFADLOF SKIN TROUBLES

Had Sixty Boils when but Six Months Old-Was Annually Attacked by a Humor-It Looked Red Like a Scald and Spread Over Half Her Head - Both Troubles are Cured.

NO PRAISE TOO HIGH FOR THE CUTICURA REMEDIES

"When my little Vivian was about six months old, her papa had a boil on his forehead. At that time the child

six months old, her papa had a boil on his forehead. At that time the child was covered with prickly heat and I suppose in scratching it, her own head became infected for it broke out in boils, one after another. She had about sixty in all and I used Cuticura Soap and Cuticura Soap and Cuticura Gointment which cured her of them entirely. Then, sometime later, her little foot got sore between the toes. Being afraid it was salt rheum, I spoke to our doctor. He gave me a powder which dried it up, but soon after it broke out behind her ears. They cracked half way around and the humor spread up on to her head until, on several occasions, it was nearly half covered. The humor looked like a scald, very red with a sticky, clear fluid coming from it. This occurred every year. I think it was toward the spring, I always bathed it with warm water and Cuticura Soap and applied Cuticura Continuent which never falled to heal it up. The last time it broke out was when she was six years old. It became so bad that I was discouraged. Then I procured a bottle of Cuticura Resolvent which soon cleared it out of her blood. I continued the use of Cuticura Soap and Ointment with the Resolvent until she was perfectly well. She is now about eight years old and has never been troubled in the last two years. We also find Cuticura Resolvent a good spring medicine and we are just giving the children Cuticura Resolvent Fills as a tonic. We do not think any one can praise Cuticura Remedies too highly. Mrs. M. A. Schwerin, 674 Spring Wells Ave. Detroit, Mich., Feb. 24, 1908."

MINERAL FLAT CO. **BEGINS ACTIVE WORK**

Promoters Are Enthusiastic and Expect Great Things of the Property.

AMERICAN FORK, Jan. 22 .- The Mineral Flat Mining company has evied its second assessment and is rapidly preparing for an active campaign of development work. The long tun

of development work. The long tunnel which it is driving is being worked upon by machine drills and consequently rapid headway is being made. This Knight company is now being worked with more vigor than any of the Knight canyon properties, and it is from this that they expect to first demonstrate the value of their American Fork canyon holdings.

Manager J. C. Jenson, who was in town a short time since, is very enthusiastic over the property, and says some great things about the future. The development of this ground is being done in a style which suggests permanency and at the same time demonstrates the faith that the owners have in the ground. The objective point which the tunnel is headed for is the tapping of a vein of galena ore which they have opened up on the surface and which seems to be of a permanent nature. The supposition is that the time the tunnel taps it, which will get it at a depth of about 700 feet, some exceptionally good results are looked for.

The Knight people are also preparing to do some extensive work on their

are looked for

The Knight people are also preparing to do some extensive work on their newly organized company grounds, which is located on the Millar hill, and known as the Millar Hill Consolidated. This ground no doubt ranks second in importance of the Knight canyon holdings, and in the opinion of J. C. Jenson, the vice president, covers the cream of the Millar bill.

Tintic Ore Shipments

Special to The Tribune.

EUREKA, Jan. 22—Tintic ore shipments, by carloads, for the week ending today, were as follows:

Sloux Con. 14
Iron Blossom 2
Centennial-Eureka 46
Yankee 2
Eureka Hill 2
Colorado 2 Iorn Silver Prisco.

Ninety-nine carloads of ore were shipped to the Tintic smelters and four carloads of buillon were shipped from the smelters.
